

# Secure user identities for businesses in the cloud

At SailPoint, everything revolves around identity governance and administration (IGA). As an addition to **identity access management (IAM)**, **identity governance (IG)** involves a structured, regular review of the authorization status of all users or user groups as a means of ensuring compliance with provisions and legal regulations. Cloud businesses benefit from both secure access and also the acceleration of processes and transactions that automation brings.

## Current requirements

Businesses are facing key challenges – they want to drive digitalization, use the latest technologies and switch to the cloud. All of this makes user access management much more complex.

Manual processes in particular are both limited and prone to errors, characteristics further compounded by higher legal requirements and security risks.

As a trusted market leader and industry innovator, SailPoint Identity Security offers the ideal solutions for overcoming these challenges.

## The solution

The SailPoint Identity Platform is the foundation for ensuring corporate security, focusing on four areas.

The first is **visibility** of all potentially risky access – including access by hidden or unknown users. This gives you an insight into security risks and vulnerabilities.

**Automation** of access to applications, systems and cloud platforms replaces manual processes and ensures greater security in the provision and management of all access.

This results in significant **acceleration** of all processes.

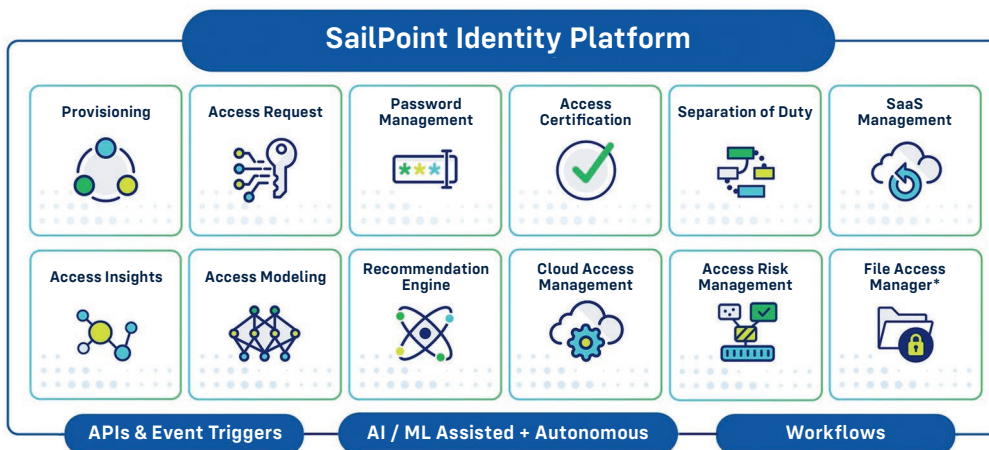

Thanks to the **intelligence** of state-of-the-art technologies, you're well equipped for the future with the power to make dynamic adjustments to your access controls.

## The benefits to you

As a SailPoint partner, you have the opportunity to expand your portfolio with industry-leading solutions and enter the world of data security.

SailPoint and DataStore actively support you with lead generation and help you train your sales, pre-sales and service staff to create a strong developmental path for pre-sales and service provision for partners.

We focus entirely on the Swiss channel, so we've gained a great deal of expertise. This additional knowledge allows you to provide optimal support to your customers.

## Want to learn more about SailPoint and DataStore?

In an increasingly complex world, the days of single-vendor IT solutions are numbered. Our network offers opportunities for developing, providing and supporting the best and most innovative security solutions. We bring together what belongs together. The result is an ecosystem – the Network of Opportunities (NOP) – and added value for everyone involved.
